MINI SALOON & CABRIOLET 1976-2000

MINI SALOON & CABRIOLET 1976-2000

This section details the small bore, 848cc, 998cc and 1098cc, family of A Series and A+ engines (with 85H, 99H and 10H engine numbers respectively). The A Series were fitted to cars up until 1980, after which revised A+ units were introduced. A year before that, in 1979, a proper timing chain tensioner was introduced on all small bore engines, identifiable by a bulge on the upper side of the timing cover - it's important to note that this happened slightly before the introduction of A+, so while the presence of a timing chain tensioner means the engine is probably A+, it is not definitely the case.

The only way to differentiate between the A Series and the A+ 998cc/1098cc engines is by looking at the cylinder block: the A Series has a smooth cast block, whereas the A+ has a heavily ribbed, stronger block. Curiously, although the 848cc engine lasted longer in production than the 1098cc (until 1984 as opposed to 1981), there never was an A+ 848cc block, although several other less immediately obvious A+ features made it into the 848cc engine in 1980. The 998cc engine continued in production way past its 848cc and 1098cc brethren, only being discontinued at the end of 1991.

All standard engines are supplied less ancillaries (flywheel, starter motor, distributor, manifolds, etc.).

MINI SALOON & CABRIOLET 1976-2000

MINI SALOON & CABRIOLET 1976-2000

This section details the large bore, 1275cc, A Series and A+ engines. The A Series was fitted to the Mini 1275 GT up until 1980 and for the last year of that model's production, through 1980, the revised A+ unit was introduced in preparation for its use in the Austin Metro. There was then a decade's gap before the 1275 engine appeared officially in a Mini again in the Cooper of 1990, again in A+ form. By 1992 the 1275 A+ was the only engine offered in the Mini and that situation continued, with developments to keep abreast of emissions regulations (including single point injection, 'SPi', then multi point injection, 'MPi'), until the end of production in 2000.

The easiest way to differentiate between the A Series and the A+ engines is by looking at the cylinder block: the A Series has a smooth cast block, whereas the A+ has a heavily ribbed, stronger block.

All standard engines are supplied less ancillaries (flywheel, starter motor, distributor, manifolds, etc.).

Performance and tuned engines were once the hobby of the serious enthusiast only, requiring considerable technical knowledge. Since that time a quiet revolution has taken place with large engine remanufacturers applying factory production techniques to the accepted and proven tuning specifications. You can now have a reliable performance engine, for everyday use, but at affordable costs.

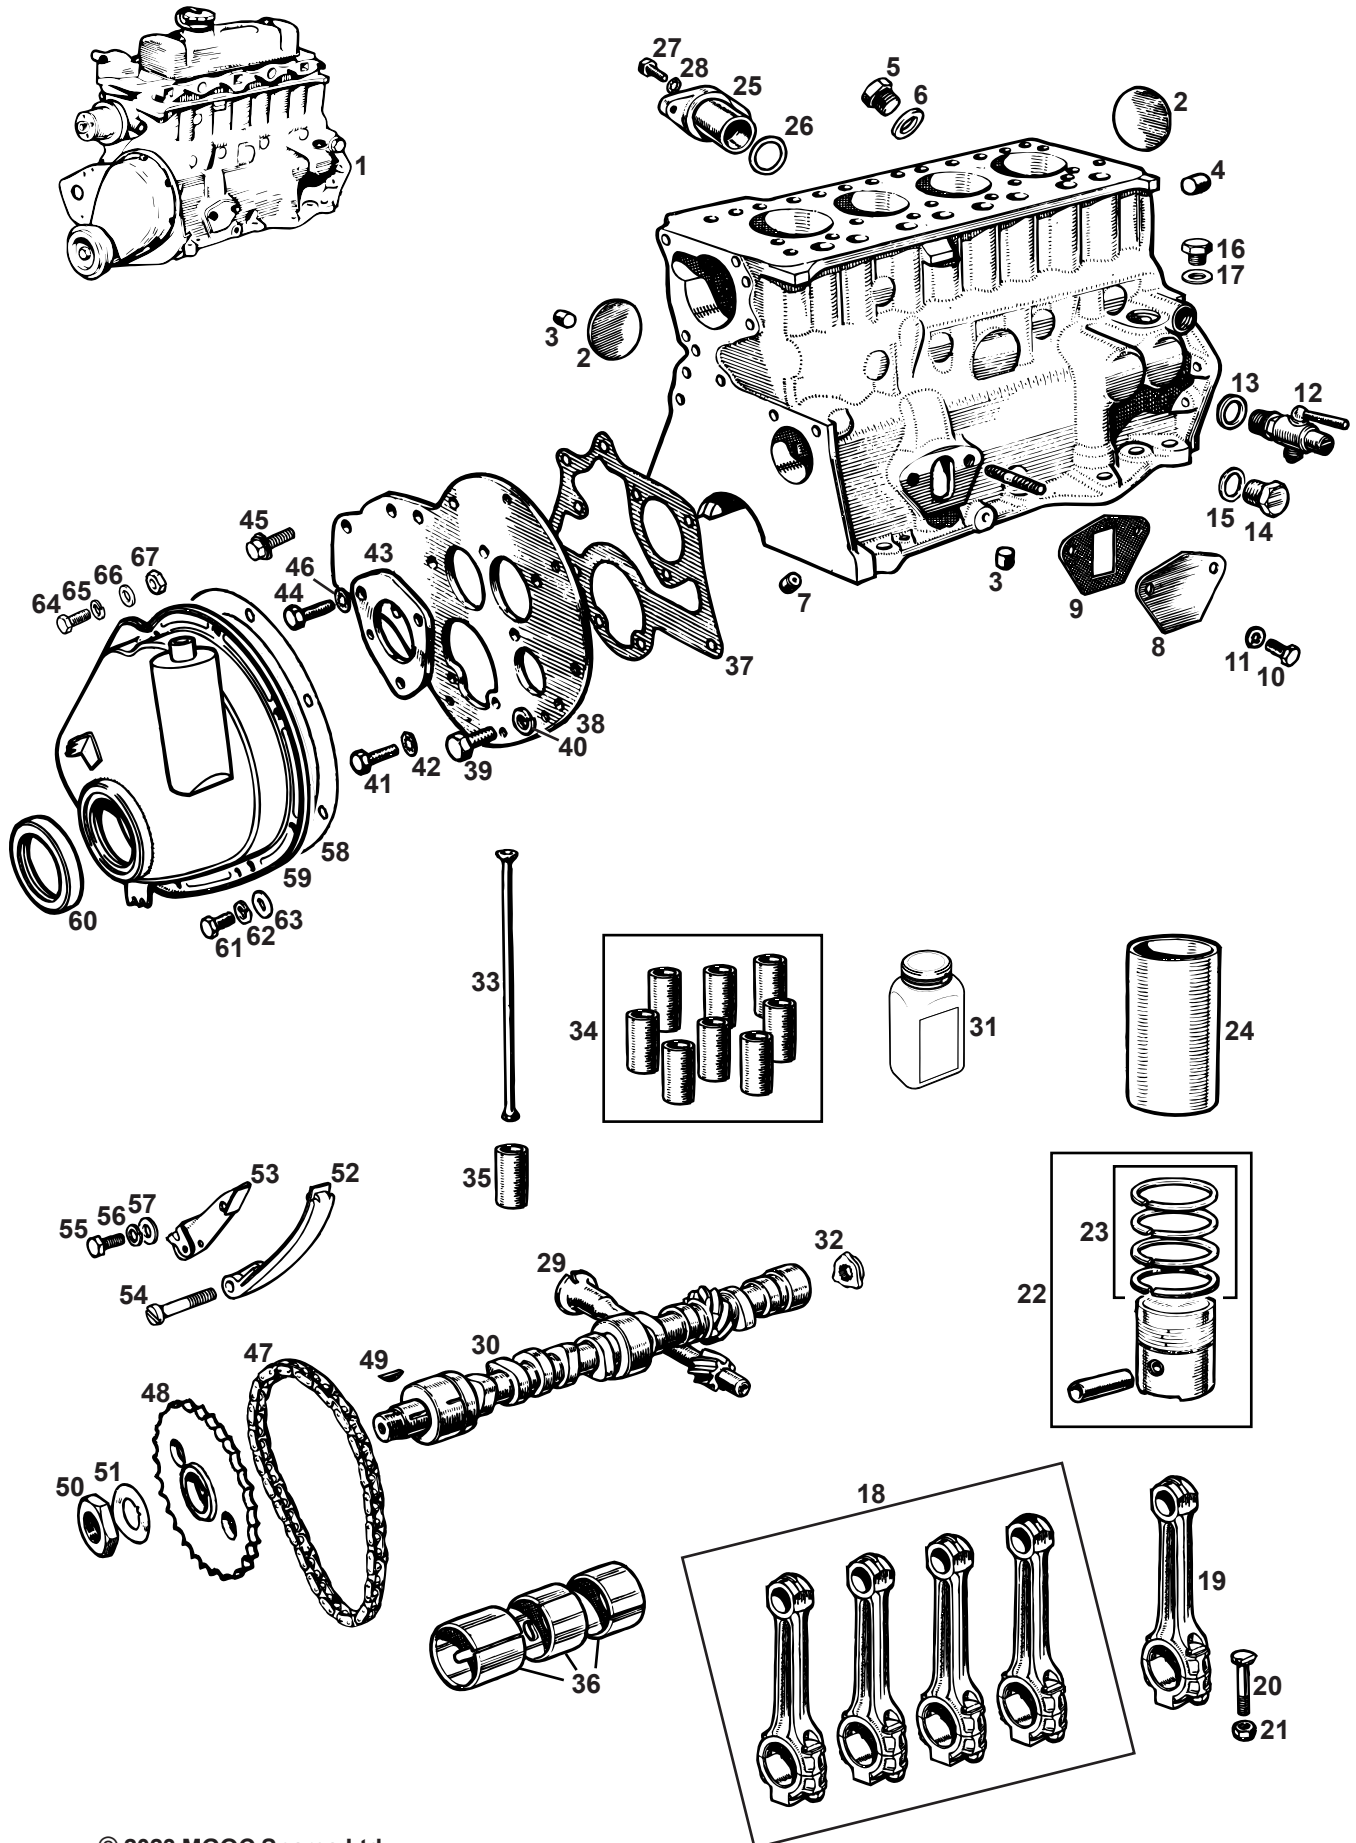

Stage II engines go beyond the external bolt-ons of Stage I by introducing a gas flowed head and a modified camshaft. They also offer full engine balancing, giving a distinct improvement in smoothness of running and longer life through reduced vibration.

Our performance engines, when installed with a larger SU carb, high flow air filter, water heated inlet manifold, gas flowed exhaust manifold and system and performance distributor (A+ type) provide faster and smoother acceleration throughout the rev range. They will also sustain high speed cruising and run smoothly and quietly (even at idle, due to their mildly tuned cam), all without detriment to reliability. Remanufactured and ready-tuned engines are now available for direct delivery via carrier to your door.

MINI SALOON & CABRIOLET 1976-2000

MINI SALOON & CABRIOLET 1976-2000

This section details the large bore, 1275cc, A Series and A+ engines. The A Series was fitted to the Mini 1275 GT up until 1980 and for the last year of that model's production, through 1980, the revised A+ unit was introduced in preparation for its use in the Austin Metro. There was then a decade's gap before the 1275 engine appeared officially in a Mini again in the Cooper of 1990, again in A+ form. By 1992 the 1275 A+ was the only engine offered in the Mini and that situation continued, with developments to keep abreast of emissions regulations (including single point injection, 'SPi', then multi point injection, 'MPi'), until the end of production in 2000.

The easiest way to differentiate between the A Series and the A+ engines is by looking at the cylinder block: the A Series has a smooth cast block, whereas the A+ has a heavily ribbed, stronger block.

80	RTC440A	Fuse box ass'y - 4 fuse type	1	Up to 1994
81	518995A	Lid - Fuse box	1	
82	AB610081	Screw - Fuse box fixing	2	
83	GHF1030	Nut - Lokut	2	
84	GFS3005	Fuse - 5 amp - Pack of 5	A/R	
	GFS3005S	Fuse - 5 amp - Each	A/R	
	GFS3010	Fuse - 10 amp - Pack of 5	A/R	
	GFS3010S	Fuse - 10 amp - Each	A/R	
	GFS3015	Fuse - 15 amp - Pack of 5	A/R	
	GFS3015S	Fuse - 15 amp - Each	A/R	
	GFS3025	Fuse - 25 amp - Pack of 5	A/R	
	GFS3025S	Fuse - 25 amp - Each	A/R	
	GFS3035	Fuse - 35 amp - Pack of 5	A/R	
	GFS3035S	Fuse - 35 amp - Each	A/R	

Important note: The 24 fuse type fuse box used on Minis built between 1994 and 1996 is not - and has never been - available separately. The only way to obtain a new one is to buy a new main wiring harness (loom) for the car, the fuse box being an integral and non-removable part of it. Unsurprisingly, most 1994-96 fuse boxes are repaired rather than replaced when they require attention.

Note: HS4 carburetters referred to in this section are all of the 'Capstat' (or 'Waxstat') type as fitted to Minis from 1976 onwards, recognisable from the earlier non-Capstat HS4 design by a large diameter metal cap crimped onto the plastic body of the jet. If your car is fitted with an earlier non-Capstat HS4, please contact us for details of available parts and assemblies.

HS4, HIF44 and HIF38 Carburettor Maintenance Kits and Tools

- | | | | | |
|---|----------|---------------------------------|-----|------------------------------|
| 1 | AUE811 | Carburettor gasket kit | 1 | HS4 carburettor |
| An HS4 gasket kit includes manifold gasket, air filter gasket, suction chamber damper washer, float lid gasket and jet union washer and seal. | | | | |
| 2 | WZX1505A | Carburettor gasket kit | 1 | HIF44/HIF38 carburettor |
| An HIF gasket kit includes manifold gasket, air filter gasket, suction chamber damper washer, float lid gasket, float spindle washer, mixture screw seal, throttle spindle seals, starter spindle seals and O rings, plus throttle spindle lock tabs. | | | | |
| 3 | CSK65 | Carburettor service kit | 1 | HS4 carburettor |
| An HS4 service kit includes the gasket kit, plus float chamber needle and seat, jet assembly and clip for the jet pick up link. | | | | |
| 4 | CSK75 | Carburettor service kit | 1 | HIF44 carburettor |
| | CSK94 | Carburettor service kit | 1 | HIF38 carburettor |
| An HIF service kit includes the gasket kit, plus float chamber needle and seat and jet assembly. | | | | |

| | CRK129 | Carburettor rebuild kit | 1 | HS4 carburettor, 1275cc |
| An HS4 rebuild kit includes the service kit, plus throttle spindle, throttle spindle bushes, throttle disc and throttle disc screws. Note the carburettor body must be reamed before fitting spindle bushes. | | | | |
| 6 | CRK167 | Carburettor rebuild kit | 1 | HIF44 carburettor |
| | CRK274 | Carburettor rebuild kit | 1 | HIF38 carburettor |
| An HIF rebuild kit includes the service kit, plus throttle spindle, throttle spindle bushes, throttle disc and throttle disc screws. Note the carburettor body must be reamed before fitting spindle bushes. | | | | |
| 7 | CSK003 | Carburettor sundries kit | 1 | HS4 carburettors |
| An HS4 sundries kit includes choke cam pivot bolt and tubes, suction chamber screws, float lid screws and washers, stop screws and springs, jet nut, jet spring and washer, spindle lock tab and float pivot pin. | | | | |
| 8 | CSK004 | Carburettor sundries kit | 1 | HIF44/HIF38 carburettor |
| An HIF sundries kit includes stop screws and springs, float chamber screws, float spindle, throttle spindle lock nuts and suction chamber screws. | | | | |
| 9 | Z015 | SU tuning tool kit | 1 | |
| 10 | BCC500 | SU carb cleaner - 500ml aerosol | A/R | |

MINI SALOON & CABRIOLET 1976-2000

Steering Wheel Note: Most original factory steering wheels for models from 1976 onwards are no longer available. The only exceptions, at time of writing, are the 3 spoke leather wheels (i) in black, as used on pre-1997 Coopers and (ii) in Light Stone Beige, as used in certain pre-1997 limited editions such as the British Open Classic.

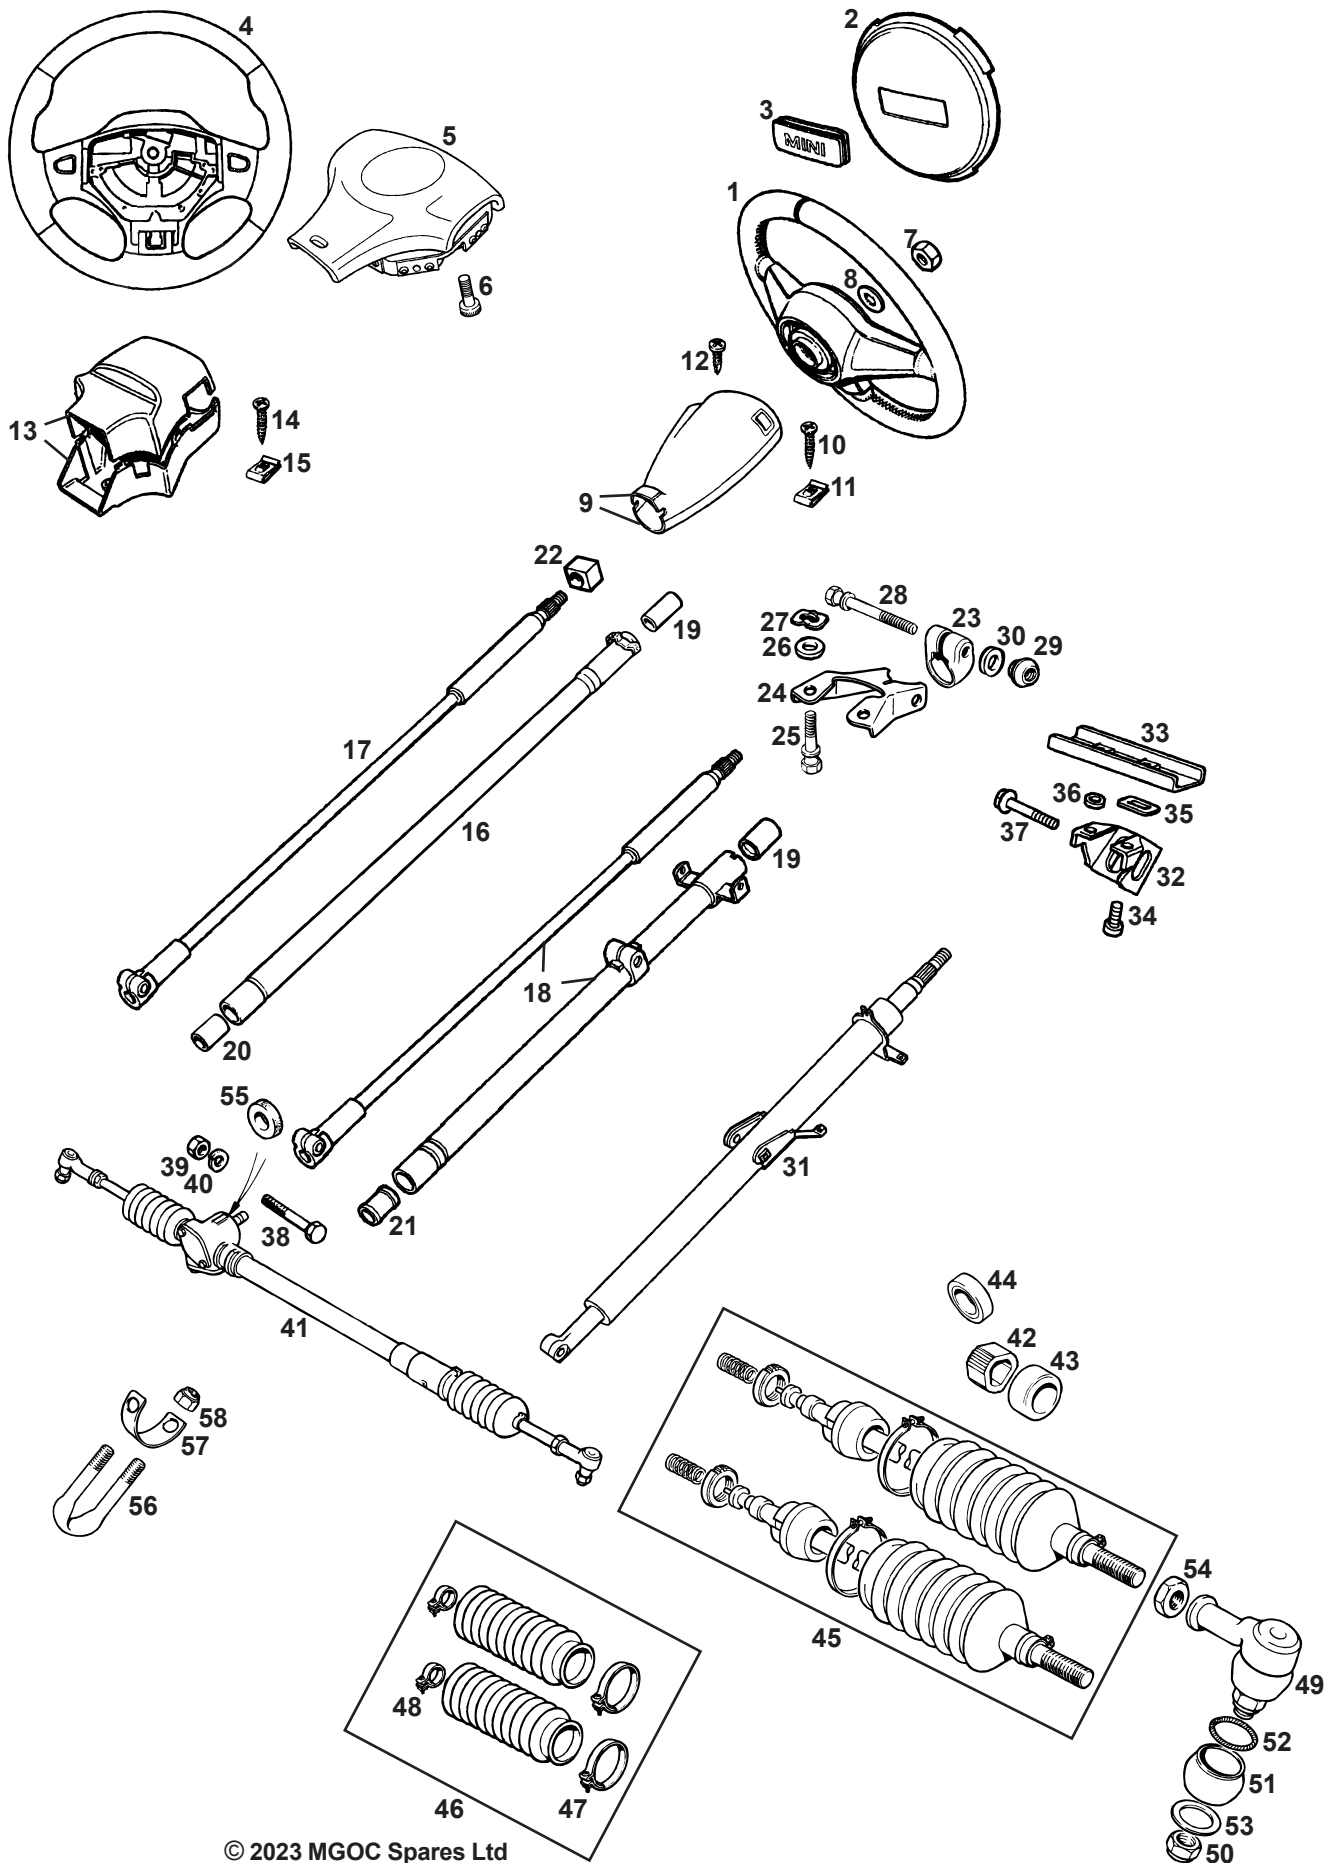

If you require a new steering wheel, for most models the best option is to choose one of our high quality accessory or sports wheels.

Similarly, steering wheel centre pads and badges for each model are not available except for a handful of pre-1997 items and, of course, the steering wheel centre airbag as used from 1997 onwards.

	CMZ422	Screw - Drum securing	4	
40	21A1058KIT	Backplate assembly - RH	1	Rear brakes
	21A1060KIT	Backplate assembly - LH	1	
Back plate assemblies from the original manufacturer include backplate, shoes, springs, adjuster, 3/4" wheel cylinder (GWC1102) and handbrake lever - in other words everything apart from the brake drum itself to renew the entire rear brake. Being built with 3/4" wheel cylinders, the backplate assemblies fit the vast majority of Mini saloons from 1976 onwards, the only exceptions being some 1976-77 1275 GTs and some other saloons from 1976-80 which had diagonally split brake systems (see wheel cylinders for model details).				
41	21A1058	Backplate - Bare - RH	1	Rear brakes
	21A1060	Backplate - Bare - LH	1	
Backplates require the wheel cylinder locating pin holes redrilling for the small number of early (1976-80) Mini saloons which used wheel cylinders of diameters other than 3/4" (see wheel cylinders for model details). Note that the backplates are to the latest specification, which means a blanking plug will be required for each backplate to seal an unused hole (see AEU1541A below).

MINI SALOON & CABRIOLET 1976-2000

1976-88 Brake Master Cylinder Without Servo

1	GMC167	Brake master cyl. - Metric - Switch in body	1	1976-80 diagonally split dual circuit brakes Original item for 1978-80 front/rear split dual circuit brakes, now replaced by metric cylinder GMC227 (see below)
2	GMC173	Brake master cyl. - Imperial - Switch in body	1	
3	GMC198	Brake master cyl. - Metric - Switch in cap	1	
	GMC192	Brake master cyl. - Metric - Switch in cap	1	
	GMC195	Brake master cyl. - Metric - Switch in cap	1	
	GMC227	Brake master cyl. - Metric - Switch in cap	1	

Note: the GMC227 master cylinder is recognisable from all of the earlier front/rear split dual circuit master cylinders, which it replaces, by its 12mm lower port. This means that when used to replace any of the earlier 1978-85 master cylinders a conversion brake pipe kit will also be required (BAU5654 for RHD, BAU5655 for LHD, see below).

4	AAU1752	Switch - In body	1	] Fits master cylinders GMC167 and GMC173

MINI SALOON & CABRIOLET 1976-2000

Important note: Some earlier Minis (usually cars assembled at the Seneffe factory in Belgium) were fitted with RHD/LHD switchable headlamps of a Cibie/Valeo design, usually recognisable by the outer chrome rims of the headlamps being larger (deeper) than those usually seen on a Mini. No parts of the Cibie/Valeo headlamp assembly are currently available other than the bulbs which are the P45T type listed below. Cibie/Valeo lamp assemblies may be replaced in their entirety by any of the other headlamp types shown here, with the exception of load levelling headlamps.

Important note: The 24 fuse type fuse box used on Minis built between 1994 and 1996 is not - and has never been - available separately. The only way to obtain a new one is to buy a new main wiring hanes (loom) for the car, the fuse box being an integral and non-removable part of it. Unsurprisingly, most 1994-96 fuse boxes are repaired rather than replaced when they require attention.

MINI SALOON & CABRIOLET 1976-2000

MINI SALOON & CABRIOLET 1976-2000

With the thousands of minor changes wrought on the 1976 onwards Mini bodyshell during its production, it is inevitable that some compromises have had to be made to avoid offering several different bodyshell specifications for each year of the Mini's production (which would obviously not be a commercial proposition) - for example, the Mk IV bodyshell comes with the roof cantrail that accepts the 1985 onwards flush fitting interior lamp rather than the earlier, bulkier lamp (for which an adaptor plate would have to be made in order to fit it).

Once the bodyshell is painted, the threads of all captive nuts and studs should be cleared of paint before fitting out commences.

1	BMP343	Bodyshell - Complete assembly 1	Mk IV models 1976-90, plus Cooper carb limited edition 1990
Key features: rubber mounted front subframe, egg-shaped 'rotodip' aperture in centre of upper bulkhead, cooling slats for radiator in LH inner wing. May be used - with some minor modifications - for some pre-1976 Mk III models, so long as a rubber mounted front subframe is also used and so long as the donor car has a rod change gearbox.			
1	AAA36002	Bodyshell - Complete assembly 1	998cc 1990-92, 1275cc Cooper carb (not limited edition) 1990-91, 1275cc Non-Cooper carb models 1992-94, 1275cc single point injection (SPi) models 1991-96
Key features: no 'rotodip' hole in centre of upper bulkhead (smaller offset wiring loom hole instead), large round hole for radiator fan in LH inner wing, hole for fuel injection/late model carb feed and return pipes in boot floor (will require plugging on earlier carb models).			
1	AAA360200	Bodyshell - Complete assembly 1	1275cc multi point injection (MPi) models with 12" wheels
Key features: small offset wiring loom hole in centre of upper bulkhead, no radiator cooling hole of any kind in LH inner wing, front mounted radiator type front panel with large grille aperture strut, hole for fuel injection feed and return pipes in boot floor.			
1	AAA360210	Bodyshell - Complete assembly 1	1275cc multi point injection (MPi) models with 13" wheels (Cooper Sport Pack, Cooper Sport, Mini 40, Kensington, etc)
Key features: small offset wiring loom hole in centre of upper bulkhead, no radiator cooling hole of any kind in LH inner wing, front mounted radiator type front panel with large grille aperture strut, hole for fuel injection feed and return pipes in boot floor, cut back and reinforced front wheelarches, wheelarches drilled for Sport Pack arch extensions.			
2	CZH594	Bodyshell - Complete assembly 1	Clubman and 1275 GT 1976-80
Key features: rubber mounted front subframe, egg-shaped 'rotodip' aperture in centre of upper bulkhead, cooling slats for radiator in LH inner wing. May be used - with some minor modifications - for some pre-1976 Mk III models, so long as a rubber mounted front subframe is also used and so long as the donor car has a rod change gearbox.

MINI SALOON & CABRIOLET 1976-2000

Note on limited edition Minis: Marketing of the Mini through the 1980s and 90s was famous/infamous (delete as appropriate!) for the profusion of limited edition Minis created. Inevitably each one had its own unique identifying embellishments, most often in the form of vinyl graphics (decals) but also sometimes featuring specially commissioned badges.

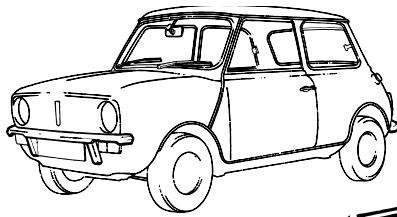

Both the decals and the badges were made in small production runs - sufficient quantities for the limited edition in question, plus an estimated quantity for the next few years' spares requirements - and most as a result became 'no longer available' as spare parts within ten years or so.

Surprisingly successful moves have been made over the years to reintroduce many items for owners wishing to restore or maintain the authentic look of their limited edition Minis. The badges are listed here and the more popular graphics, coachlines and other vinyl decals are listed in the following section.

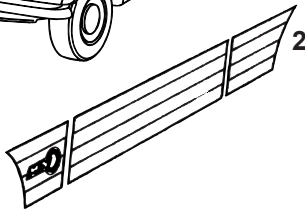

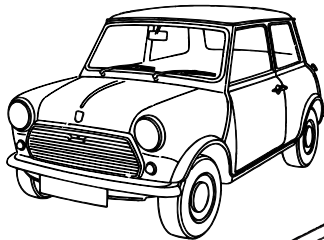

1	CZH3957	Bonnet badge - 'Mini' - Silver on black	1	1976-79, not Clubman or 1275 GT

MINI SALOON & CABRIOLET 1976-2000

Marketing of the Mini through the 1980s and 90s was famous/infamous for the profusion of limited edition Minis created. Inevitably each one had its own unique identifying embellishments, most often in the form of vinyl graphics (decals) but also sometimes featuring specially commissioned badges.

Both the decals and the badges were made in small production runs - sufficient quantities for the limited edition in question, plus an estimated quantity for the next few years' spares requirements - and most as a result became 'no longer available' as spare parts within ten years or so.

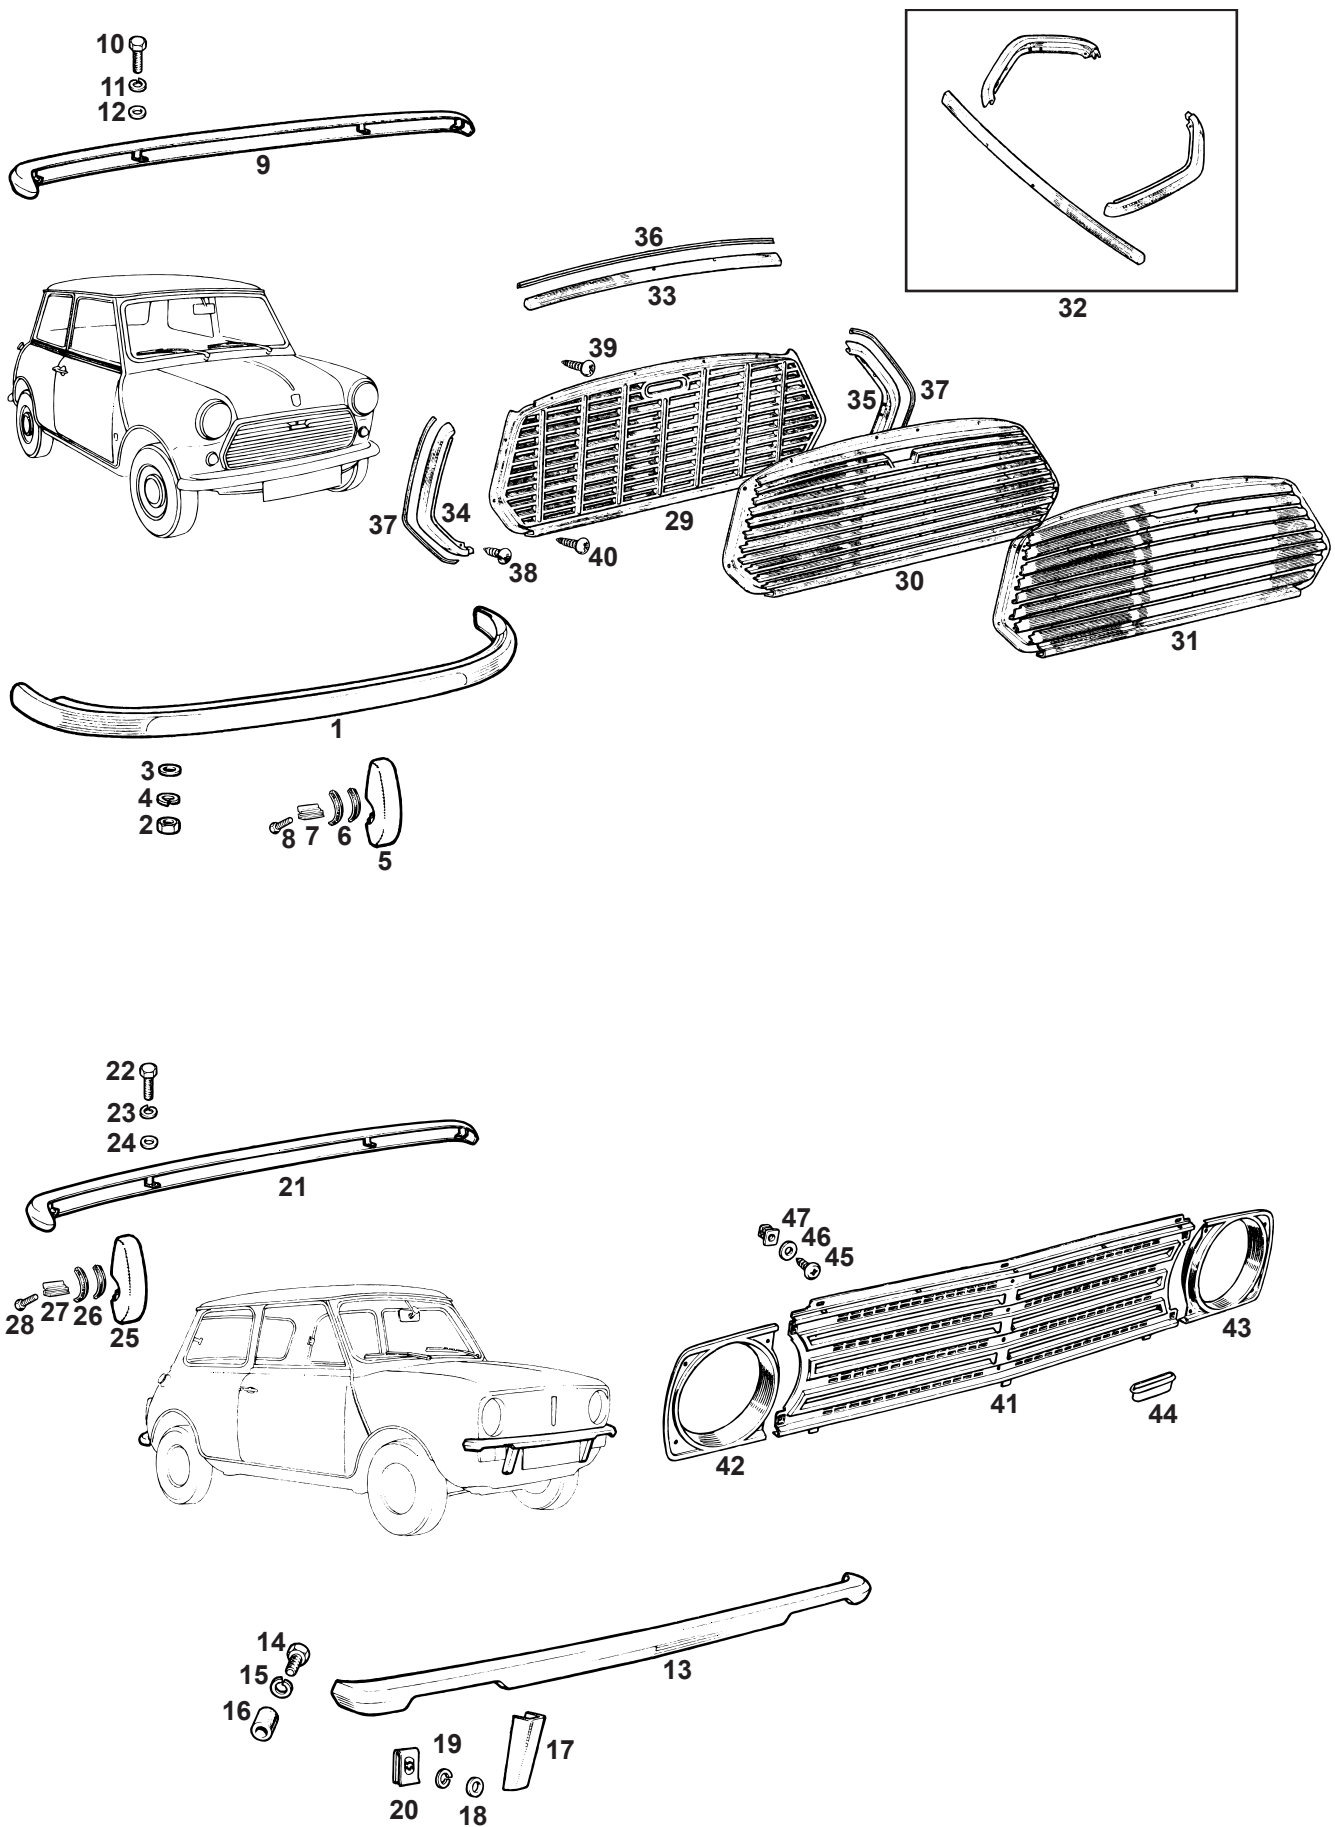

Surprisingly successful moves have been made over the years to reintroduce many items for owners wishing to restore or maintain the authentic look of their limited edition Minis. While the badges are listed in the previous section it's just not possible to list here all of the legions of graphics, coachlines and other vinyl decals.

Only the most popular limited edition decals are therefore listed, along with the popular 1275 GT, City, Sprite, Mayfair and Cooper decals; if you can't see yours among them, please contact us.
