

MGF/TF Sunvisor Repair Kit

Part Number : SVR1

Before you start, remove your existing sun visors from your car by undoing the retaining screws with a philips head screwdriver, and remove the sun visor flaps.

Installing a Sun Visor Repair Kit with the sunvisors fitted on the car can be tricky and may result in damage.

1. We have started with the longer Sun Visor Repair which is installed on the passenger side sun visor, fitted with mirror.

Carefully ease the pry bar underneath the inside edge of the retaining plate as per image A.

Gently wiggle the pry bar up and down until you feel the retaining clips begin to release.

Carefully move the pry bar further underneath the retaining plate and rock back and forth until the plate has popped off entirely.

NB. Avoid twisting the tool during removal to avoid damage to your sunvisor and or the tool.

Your sunvisor should now look like image B.

2. Offer up the new retaining plate so that the clips line up with the holes on the sun visor. See image C. Note. The larger radius curved edge should face away from the centre of the car.

3. Once you're happy with the alignment, gently press the retaining plate into the sun visor until the clips engage.

Repeat steps for the driver side sun visor

4. Reinstall your sun visors.
