

## TONNEAU COVER STICKS (PAIR)

A pair of tonneau cover sticks are essential equipment for the fitment of a full tonneau cover to your MGB or MGC, supporting the tonneau cover and folding it down in a neat, straight line behind the seats when the car is in use. A very simple but effective design.

Manufactured exactly to the original MG design and finished correctly in the same shade of grey paint as used on 1960s MGB and MGC hood frames, the tonneau cover sticks slot into sockets located on the main hood pivot mounting points when in use. When the tonneau cover is not in use, the sticks stow in their own protective bag (available separately - see recommendation below) in the boot.

*Easy to fit.* The two half sticks simply slide together and then slot into the sockets in the car. The tonneau cover can then be attached to the car and the front half folded down over the sticks, securing to the Lift the Dot pegs behind the seats.

*No tools required.*
