

UNDERCARPET SOUND PROOFING SET MGA

Designed to complement the range of Club carpet sets for the MGA, the undercarpet sound proofing set consists of sealed, accurately tailored felt pads for the floor, tunnel, footwells, toeboard and heelboard, ready to fit to your car.

This easy-to-fit kit makes for a significant and very noticeable reduction in engine, transmission and road noise intrusion in the cockpit. It also, in adding depth to the carpet, contributes to a more luxurious interior ambience in your retrimmed MGA and satisfyingly fills out contoured carpet sections on the tunnel etc.

The undercarpet sound proofing set fits MGA Roadsters and Coupes of all years.

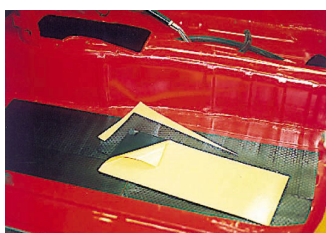

Easy to fit. Some felt pads, for instance the footwell pieces, may be simply placed in position and are held by the carpet clipped on top of them. Others, such as the tunnel and heelboard pads, are best applied with a light amount of upholstery adhesive to secure them in position before fitting the carpet over them.

Basic hand tools required. Upholstery adhesive, plus a craft knife for any trimming required, for example around the carpet retaining studs if necessary. Also the carpet studs may need raising slightly to take account of the thickness of the felt. This can be done with packing washers under the studs; a pop rivet gun or screwdriver, as applicable, will be required to refit the studs to the floor.
