

## BONNET SOUND PROOFING SET MGB

Improved design of sound proof pads to fit all MGB models. Originally fitted to later 1970s MGBs and GTs but equally applicable and effective in earlier models, sound proofing pads absorb a significant amount of engine noise and also reduce the drumming effect inherent in the large expanse of the bonnet panel - a great and very simple modification for cars not already fitted with them.

Accurately made from die cut and sealed sound proofing material, the pair of pads include a self adhesive backing, making installation extremely quick and easy - fitment takes a matter of minutes.

As stated above, the bonnet sound proofing set will fit all MGBs and GTs, including both aluminium and steel bonnet fitted cars. It will also fit V8s with original style SU carburation without modification, although two round carburettor clearance holes may of course be made in the rear pad for authenticity of appearance, if desired.

*Easy to fit.* Simply remove backing from self adhesive side and apply to underside of bonnet, smoothing out trapped air bubbles as you go. If engine fume residue or greasy patches are present on the bonnet, these will need cleaning off before pad fitment to ensure maximum effectiveness of the adhesive.

*No tools required.*
