

RADIO CONSOLE ASSEMBLY MIDGET & SPRITE

Faithful reproduction of the original equipment radio console offered as an optional extra and accessory by the factory for Midgets and Sprites through the 1970s - though it fits and looks perfectly at home in any Midget or Sprite from 1964 wind-up window models onwards.

Manufactured from smartly finished black vinyl-covered steel and featuring a bright finish speaker grille and bezel, the console does not include a radio or a speaker, which must be sourced separately.

A budget-priced glass fibre replica radio console to the same overall design is also available; for this item, please contact MGOC Spares for details.

Easy to fit. Self tapping screws hold the console to the underside of the dash (or screws and nuts - probably No 10 UNF - if larger holes are already there on the lower flange of the dash). Self tapping screws also hold the console to the gearbox tunnel and engine tunnel.

Basic hand tools required. The usual set of crosshead screwdrivers, plus a spanner (probably 3/8" or 5/16" AF) if using screws and nuts under the dash.
