

CARBON FIBRE DASH MIDGET

Carbon fibre is the very latest medium for MG interiors. A constantly changing chequered pattern is created by light reflecting through the carbon fibre laminated weave, making the pattern appear alive beneath the surface. Lesser printed or 'carbon fibre effect' items do not display this intriguing feature - note that Club carbon fibre products are made from genuine carbon fibre.

A Club carbon fibre dash is the main stage in the decoration of your MG's cabin with this high-tech, ultimate sporting material; other carbon fibre features available include door cappings and even a tax disc holder, to complete the effect.

A polymer lacquer finish brings depth and sheen to the Club carbon fibre dash. Screws are provided to secure the dash through pre-drilled mounting holes.

Available for RHD rocker switch Midgets, in early gauge (1972-77) or late gauge (1978-79) format.

Easy to fit. Dash secured with the screws provided through pre-drilled mounting holes. Holes require drilling in the original dash panel. No disconnection and reconnection of dash features such as instruments and switches is required.

FITTING INSTRUCTIONS

Basic hand tools required. The usual set of crosshead screwdrivers, plus a drill for the screw holes in the original dash.
