

SEAT BACKBOARD MGA (NOT DELUXE)

This style of seat backboard was fitted to all MGA seats other than the optional extra Deluxe style. The Club seat backboard is exactly to original MG specification, guaranteeing perfect fit and performance in your MGA.

The main tasks of the seat backboard are to tension the back panel of the seat back (or squab) cover and to prevent the seat's substructure and frame from disfiguring the back panel. Seat backboards are sometimes overlooked during a seat rebuild - a mistake, since the backboard is usually quite out of shape by the time the seat becomes due for reupholstering.

Another item along with a new seat foam, padding and wooden base that really should be on the shopping list when reupholstering an MGA front seat.

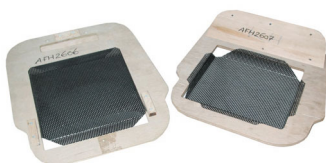

Easy to fit. The backboard simply attaches to the rear of the seat squab frame with adhesive tape. The backboard is gently fashioned into a curved profile around the back of the frame while doing so. Note however that reupholstering MGA seats generally requires patience and some skills - if you are concerned by this, remember that the Club offers new or exchange reupholstered seat assemblies.

Basic hand tools required. Adhesive tape to attach board to frame.
