

STAINLESS STEEL WHEEL NUTS MIDGET

Corrosion resistant, durable stainless steel wheel nut for all steel wheel fitted MG Midgets from 1970 onwards, featuring a highly polished finish on the end of the nut and a choice of plain or neatly embossed 'MG' logo.

Designed to match both the early 1970-71 Rostyle steel wheel and the later, more commonly found Rostyle design fitted to Midgets from late 1971 onwards, this wheel nut is also the correct item to use with Club eight spoke alloy wheels on all years of Midget. The plain version is of course also appropriate for Sprites. All original Midget or Sprite tool kit wheel braces fit this wheel nut.

Sixteen required per car, or twelve if also using a Club locking wheel nut set.

Easy to fit. Simply replace each old wheel nut with a new one, one at a time. Take the opportunity while you're doing the job to smear a small amount of anti-sieze compound or copper grease on each wheel stud.

Basic hand tools required. All you need is your car's wheel brace or a torque wrench.
