DOOR PANEL CLIP PACK MIDGET (PACK OF 10)

Metal spring trim clip, used to hold door trim panels to the doors on Midgets and Sprites. Also used on rear quarter panels and rear cockpit panel - nine required per door, or twenty-six required in total, if you're fitting a complete trim panel set.

The clip has many other trim-retaining applications in classic British motor cars, including Morris Minor and the Mini.

Sold in packs of ten (or individually, if desired - contact MGOC Spares).

Easy to fit. The 'U' part of the clips can be inserted by hand in the pre-cut holes in the backboard of the trim panel - note that adjustment of the position of the 'vee' part of the clip (the part that clips into the car body) may be achieved by swivelling the clip around in the hole in the trim panel. Always offer the panel up to the car to check that all clips are positioned correctly before starting to fix the panel in place.

No tools required. clips fit into the trim panel by hand and the trim panel is clipped to the car with firm hand pressure.
